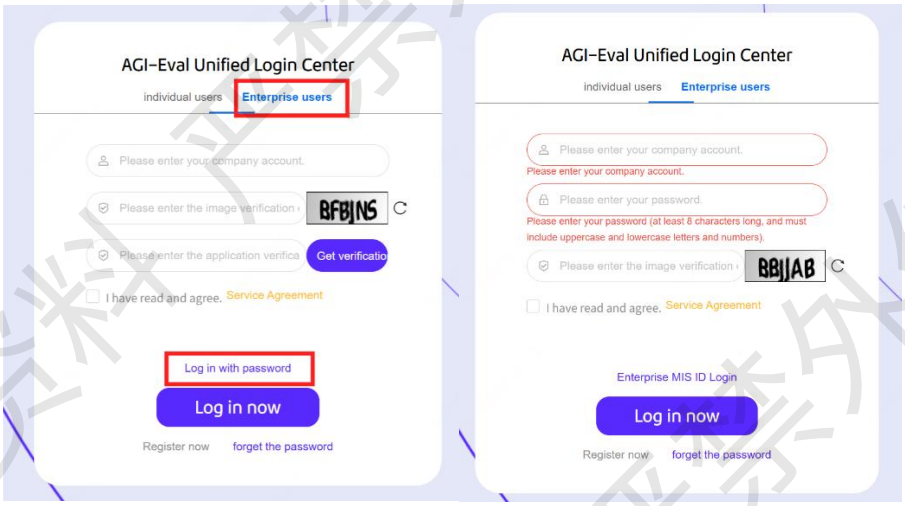
AGI-Data Platform User Manual

Platform Access: https://agi-eval.cn/agiData

1. Registration Process

Click on the platform link. Please use the provided account and password, select [Enterprise users] and [Log in with password].



2. Viewing Missions

After logging in, you can view the corresponding missions in [Mission Square] - [All tasks] only after the administrator grants mission permissions.

- **Note:** You can only perform missions notified by the administrator (based on the mission's name and mission ID). Do not click on missions that have not been notified!

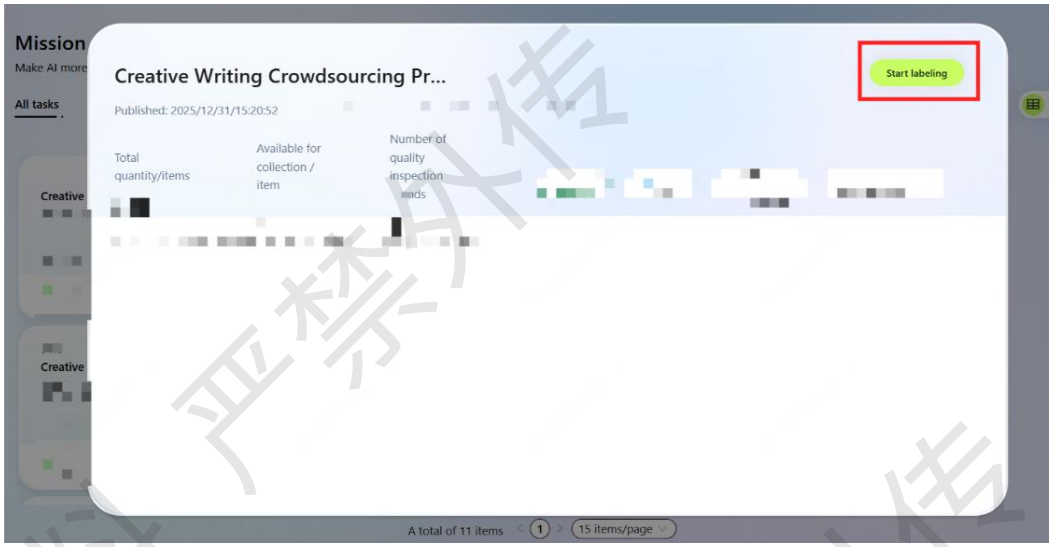
The following is an example of the mission viewing process. The mission content on the interface is unrelated to the current mission:

(1) Mission Acquisition:

Go to [Mission Square] - [My Mission] and find the mission published by the administrator.

内部资料 严禁外传

Click on the mission to enter the details page, and click [Start labeling] in the top right corner.



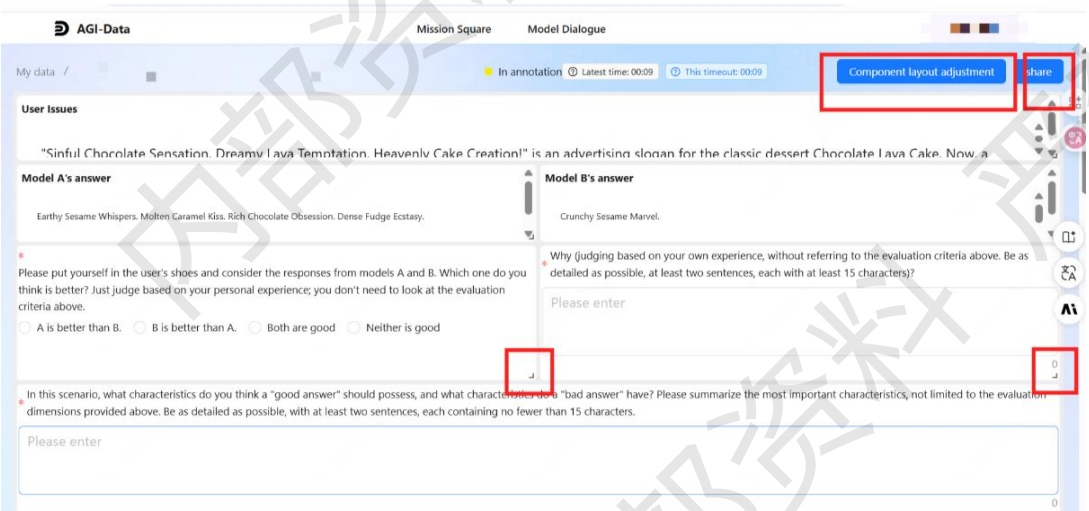
(2) Start Annotation:

After entering the mission page, you can adjust the display settings.

A. Each display box can be resized by dragging the corner mark at the bottom right, adjusting the size of the information box to your comfort for annotation.

B. In the top right corner, click [Component layout adjustment] to adjust the size of all layouts for the current mission. The changes will apply to all data once saved.

C. In the top right corner, click [Share]. If there is an issue with the mission, you can share the link with the administrator to report the issue.



- **Note: Annotation participants are prohibited from sharing links, swapping questions, cheating, or privately discussing answers. Any violations found during the review will be considered cheating, disqualifying the participant from future missions and withholding any rewards.**

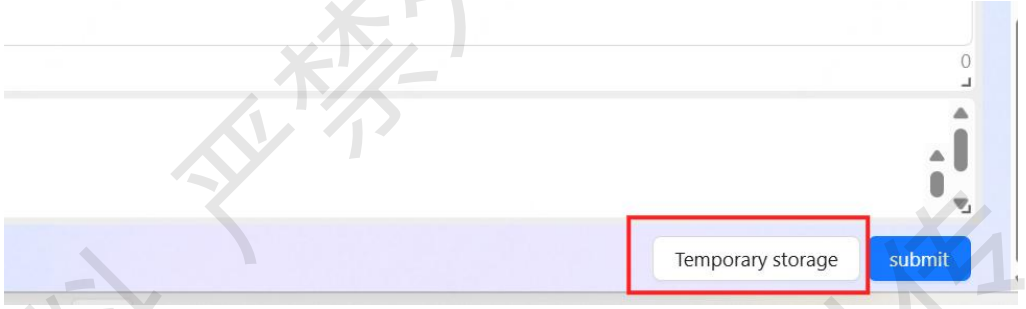
D. If you wish to take a break or interrupt the annotation process, click [Temporary storage] in the bottom right corner to save your current annotation, and you can continue later.

Once the current data annotation is finished, if you want to make changes later, you can click [Temporary storage] to find and modify the data in the draft list. If you click [Submit], the data will be submitted for review, and no further modifications can be made.



- **Note:** Clicking [Temporary storage] or [Submit] will automatically acquire a new piece of data (as long as the acquisition limit has not been reached). If you do not wish to annotate new data at this point, do not repeatedly click save draft; just exit the page.

(3) View Annotated Data:

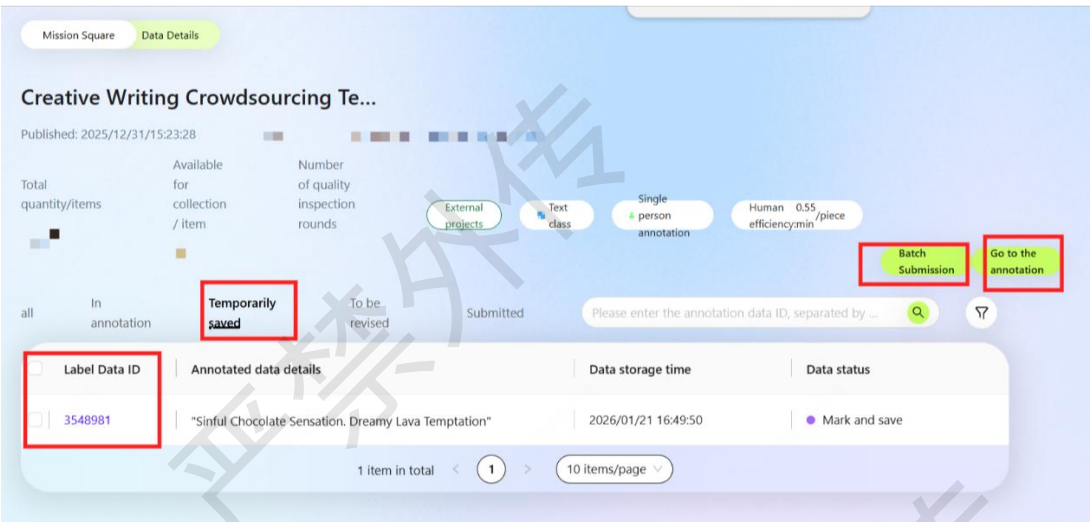
Go back to [Mission Square] - click [My mission], then click on the mission you want to view.

After entering the details page, click on the [Temporarily Saved] data, and click [Label Data ID] or [Go to the Annotation] to modify the data.

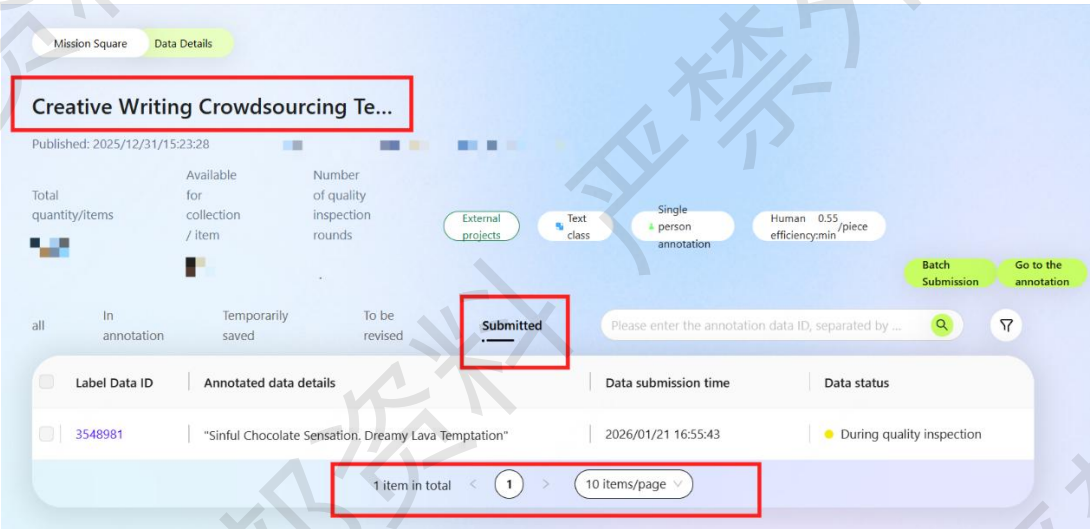
If no modification is needed, you can click [Batch Submission].

- **Note: Only after submission will the administrator begin the review.**

内部资料 严禁外传



Click [Submitted] to see how many pieces of data have been completed in the current mission.



This concludes the process of mission acquisition, annotation, submission, and viewing the annotation results.
